chrome 9302-00.801	chrome 9304-00.801	chrome 9301-00.801

Multibox

The new Multibox range from HEIMEIER offers three convenient flush mounting solutions for individual room temperature control and return temperature limitation of floor heating systems. Whether with thermostatic valve, return temperature limiter or as a combination with both elements – the installation depth of the flush boxes is only 60 mm. Cover plate with frame and thermostatic head are available alternatively in white or chrome.

for floor heating systems

Easy installation

With Multibox, the installation of flush components for floor heating systems is really fun. Because the fast installation result is always perfect. And very easy to achieve. For example thanks to the depth compensation up to 30 mm, unfavourable wall structures are a thing of the past. And also the connection lines can be insulated quickly and perfectly.

Especially ingenious is the construction of the screw fastening which enables a slanted position of the installation box to be compensated for by up to 6° on either side very easily.

The cover plate without visible screw connections is also very attractive for customers due to the selection of colours.

Always perfect!
